

IN THE SPECIFICATION

Please replace the paragraph beginning at page 10, line 15, with the following rewritten paragraph:

The outermost layer was coated with an aqueous solution containing EudragitTM RS30D "(poly(ethylacrylate, methylmethacrylate) trimethylammonio-ethylmethacrylate chloride, Mw 150,000)" which is a relatively water-insoluble macromolecular substance, talc, acetylated monoglyceride (MyvacetTM 9.45) and Polysorbate 80, having the actual weight to be coated.

Please replace the paragraph beginning at page 11, line 21, with the following rewritten paragraph:

The granules were coated with an aqueous solution containing EudragitTM RS-100 "(poly(ethylacrylate, methylmethacrylate) trimethylammonio-ethylmethacrylate chloride, Mw 150,000)", EudragitTM RS-100L "(poly(ethylacrylate, methylmethacrylate) trimethylammonio-ethylmethacrylate chloride, Mw 150,000)", triethyl citrate and talc, having the actual weights to be coated, thereby forming a layer containing a water-insoluble macromolecular substance.
